**An Introduction to Scientific Research Methods in Geography and Environmental Studies** Daniel R. Montello, Paul Sutton

This revised, updated, and extended **Second Edition of An Introduction to Scientific Research Methods in Geography and Environmental Studies** provides a broad and integrative introduction to the conduct and interpretation of scientific research in geography. It explains both, the conceptual and the technical aspects of research, as well as all phases of the research process. As in the previous edition, the authors use a framework - of a natural and social scientific approach - common to all subjects in geography. In this edition new material is included on "Computational Modeling", as well as more information about GPS and map projections, as well as an expanded chapter on Scientific Communication to present more guidance on writing a literature review.
