Global Climate Change, Environment and Energy: Global Challenges and Opportunities to Global Stability

Filiz Katman

Global Climate Change, Environment and Energy: Global Challenges and Opportunities to Global Stability Filiz Katman

Global climate change is the result of the combination of natural climate change and man-made climate change that, directly or indirectly, damages global atmosphere components observed over a comparable time period. It has both a direct and an indirect impact on the earth. Despite its overwhelmingly negative connotations, it also brings about opportunities such as the possibility of a green economy. This book covers both sides of this debate in providing comprehensive information concerning climate change, environment and energy. It is composed of several articles discussing these issues from a multidimensional perspective and elaborating upon their interdependence. The articles collected here are based upon contributions to the International Symposium on Global Climate Change, Environment and Energy: Global Challenges and Opportunities for Sustainability, hosted by the Istanbul Aydin University Energy Politics and Markets Research Centre on 25 April 2011. The aim of the conference, which is reflected in this volume, was to fulfil the responsibility owed to the earth and to humanity.
