## **Crystallography of Modular Materials (International Union of Crystallography Monographs on Crystallography)** Giovanni Ferraris, Emil Makovicky, Stefano Merlino

This is the first book to provide a comprehensive treatment of theories and applications in the rapidly expanding field of the crystallography of modular materials. Molecules are the natural modules from which molecular crystalline structures are built. Most inorganic structures, however, are infinite arrays of atoms and some kinds of surrogate modules, e.g. coordination polyhedra, are usually used to describe them. In recent years the attention has been focused on complex modules as the basis for a systematic description of polytypes and homologous/polysomatic series (modular structures). This representation is applied to the modelling of unknown structures and understanding nanoscale defects and intergrowths in materials. The Order/Disorder (O.D.) theory is fundamental to developing a systematic theory of polytypism, dealing with those structures based on both ordered and disordered stacking of one or more layers. Twinning at both unit-cell and micro-scale, together with disorder, causes many problems, "demons", for computer-based methods of crystal structure determination. This book develops the theory of twinning with the inclusion of worked examples, converting the "demons" into useful indicators for unravelling crystalline structures. In spite of the increasing use of the concepts of modular crystallography for characterising, understanding and tailoring technological crystalline materials, this is the first book to offer a unified treatment of the results, which are spread across many different journals and original papers published over the last twenty years.

**From reader reviews:**

**John McCord:**

The particular book Crystallography of Modular Materials (International Union of Crystallography Monographs on Crystallography) will bring you to the new experience of reading a book. The author style to clarify the idea is very unique. If you try to find new book to see, this book very suited to you. The book Crystallography of Modular Materials (International Union of Crystallography Monographs on Crystallography) is much recommended to you to study. You can also get the e-book through the official web site, so you can more readily to read the book.

**Flora Gordon:**

Playing with family inside a park, coming to see the sea world or hanging out with buddies is thing that usually you will have done when you have spare time, and then why you don't try thing that really opposite from that. A single activity that make you not sensation tired but still relaxing, trilling like on roller coaster you have been ride on and with addition info. Even you love Crystallography of Modular Materials (International Union of Crystallography Monographs on Crystallography), you could enjoy both. It is very good combination right, you still would like to miss it? What kind of hang type is it? Oh come on its mind hangout guys. What? Still don't get it, oh come on its named reading friends.

**Lisa Saxon:**

Crystallography of Modular Materials (International Union of Crystallography Monographs on Crystallography) can be one of your basic books that are good idea. Most of us recommend that straight away because this reserve has good vocabulary which could increase your knowledge in language, easy to understand, bit entertaining but still delivering the information. The writer giving his/her effort to get every word into pleasure arrangement in writing Crystallography of Modular Materials (International Union of Crystallography Monographs on Crystallography) although doesn't forget the main stage, giving the reader the hottest as well as based confirm resource info that maybe you can be certainly one of it. This great information could drawn you into fresh stage of crucial imagining.

**Roman Morris:**

Your reading sixth sense will not betray you actually, why because this Crystallography of Modular Materials (International Union of Crystallography Monographs on Crystallography) publication written by well-known writer whose to say well how to make book that can be understand by anyone who all read the book. Written inside good manner for you, leaking every ideas and creating skill only for eliminate your current hunger then you still skepticism Crystallography of Modular Materials (International Union of Crystallography Monographs on Crystallography) as good book not only by the cover but also by content. This is one guide that can break don't judge book by its deal with, so do you still needing an additional sixth

sense to pick this specific!? Oh come on your reading through sixth sense already alerted you so why you have to listening to one more sixth sense.
