Distributed Data Management for Grid Computing

Michael Di Stefano

Distributed Data Management for Grid Computing Michael Di Stefano
Discover grid computing-how to successfully build, implement, and manage widely distributed computing architecture

With technology budgets under increasing scrutiny and system architecture becoming more and more complex, many organizations are rethinking how they manage and use technology. Keeping a strong business focus, this publication clearly demonstrates that the current ways of tying applications to dedicated hardware are no longer viable in today's competitive, bottom line-oriented environment. This evolution in distributed computing is leading a paradigm shift in leveraging widely distributed architectures to get the most processing power per IT dollar.

Presenting a solid foundation of data management issues and techniques, this practical book delves into grid architecture, services, practices, and much more, including:
* Why businesses should adopt grid computing
* How to master the fundamental concepts and programming techniques and apply them successfully to reach objectives
* How to maximize the value of existing IT investments

The author has tailored this publication for two distinct audiences. Business professionals will gain a better understanding of how grid computing improves productivity and performance, what impact it can have on their organization's bottom line, and the technical foundations necessary to discuss grid computing with their IT colleagues. Following the author's expert guidance and practical examples, IT professionals, architects, and developers will be equipped to initiate and carry out successful grid computing projects within their own organizations.

From reader reviews:

Jacob Keys:

Within other case, little persons like to read book Distributed Data Management for Grid Computing. You can choose the best book if you appreciate reading a book. As long as we know about how is important a new book Distributed Data Management for Grid Computing. You can add information and of course you can around the world by a book. Absolutely right, because from book you can learn everything! From your country until finally foreign or abroad you can be known. About simple factor until wonderful thing you are able to know that. In this era, we could open a book or searching by internet gadget. It is called e-book. You can utilize it when you feel fed up to go to the library. Let's study.

Mia Shaw:

Do you have something that you prefer such as book? The e-book lovers usually prefer to opt for book like comic, small story and the biggest an example may be novel. Now, why not hoping Distributed Data Management for Grid Computing that give your enjoyment preference will be satisfied through reading this book. Reading habit all over the world can be said as the means for people to know world much better then how they react when it comes to the world. It can't be stated constantly that reading routine only for the geeky particular person but for all of you who wants to always be success person. So , for all you who want to start examining as your good habit, you may pick Distributed Data Management for Grid Computing become your personal starter.

Chad Steinberger:

Your reading sixth sense will not betray an individual, why because this Distributed Data Management for Grid Computing guide written by well-known writer we are excited for well how to make book which might be understand by anyone who also read the book. Written within good manner for you, dripping every ideas and composing skill only for eliminate your personal hunger then you still skepticism Distributed Data Management for Grid Computing as good book not merely by the cover but also from the content. This is one reserve that can break don't determine book by its include, so do you still needing a different sixth sense to pick this kind of!? Oh come on your examining sixth sense already alerted you so why you have to listening to an additional sixth sense.

John Dame:

What is your hobby? Have you heard which question when you got scholars? We believe that that problem was given by teacher on their students. Many kinds of hobby, Every individual has different hobby. And also you know that little person like reading or as reading become their hobby. You should know that reading is very important as well as book as to be the point. Book is important thing to increase you knowledge, except your teacher or lecturer. You see good news or update regarding something by book. Different categories of books that can you choose to use be your object. One of them is actually Distributed Data Management for

Grid Computing.
