Atlas of the Cellular Structure of the Human Nervous System

H. Hillman, D. Jarman

Atlas of the Cellular Structure of the Human Nervous System H. Hillman, D. Jarman

The **Atlas of the Cellular Structure of the Human Nervous System** presents full-color and black-and-white photographs of all the main areas of the brain--the cranial nerves, the ganglia, and peripheral nerves--viewed mainly by phase-contrast microscopy. In using unfixed tissue, shrinkage and distortion have been minimized; therefore, the structures illustrated are as identical as possible to those in intact living humans.

Key Features

- * Includes photographs of the neuroglia, the white matter, droplet fibers, and the fine structure of the nucleolus
- * Uses teased tissue and hand-dissected cells mainly from recent human post-mortem specimens--other mammalian tissue was substituted occasionally
- * In some instances, scanning differential interference microscopy, Hoffman modulation contrast, and polarizing microscopy have been used
- * Features photographs of cells identified by fluorescent monoclonal antibody studies
