Intelligent Unmanned Ground Vehicles: Autonomous Navigation Research at Carnegie Mellon (The Springer International Series in Engineering and Computer Science)

Intelligent Unmanned Ground Vehicles: Autonomous Navigation Research at Carnegie Mellon (The Springer International Series in Engineering and Computer Science)

Intelligent Unmanned Ground Vehicles describes the technology developed and the results obtained by the Carnegie Mellon Robotics Institute in the course of the DARPA Unmanned Ground Vehicle (UGV) project. The goal of this work was to equip off-road vehicles with computer-controlled, unmanned driving capabilities. The book describes contributions in the area of mobility for UGVs including: tools for assembling complex autonomous mobility systems; on-road and off-road navigation; sensing techniques; and route planning algorithms. In addition to basic mobility technology, the book covers a number of integrated systems demonstrated in the field in realistic scenarios. The approaches presented in this book can be applied to a wide range of mobile robotics applications, from automated passenger cars to planetary exploration, and construction and agricultural machines.

Intelligent Unmanned Ground Vehicles shows the progress that was achieved during this program, from brittle specially-built robots operating under highly constrained conditions, to groups of modified commercial vehicles operating in tough environments. One measure of progress is how much of this technology is being used in other applications. For example, much of the work in road-following, architectures and obstacle detection has been the basis for the Automated Highway Systems (AHS) prototypes currently under development. AHS will lead to commercial prototypes within a few years. The cross-country technology is also being used in the development of planetary rovers with a projected launch date within a few years. The architectural tools built under this program have been used in numerous applications, from an automated harvester to an autonomous excavator. The results reported in this work provide tools for further research development leading to practical, reliable and economical mobile robots.

From reader reviews:

Troy Harlow:

As people who live in the actual modest era should be up-date about what going on or facts even knowledge to make these people keep up with the era that is always change and make progress. Some of you maybe will certainly update themselves by studying books. It is a good choice for you personally but the problems coming to a person is you don't know which one you should start with. This Intelligent Unmanned Ground Vehicles: Autonomous Navigation Research at Carnegie Mellon (The Springer International Series in Engineering and Computer Science) is our recommendation to help you keep up with the world. Why, because book serves what you want and wish in this era.

Kenton Marshall:

Why? Because this Intelligent Unmanned Ground Vehicles: Autonomous Navigation Research at Carnegie Mellon (The Springer International Series in Engineering and Computer Science) is an unordinary book that the inside of the guide waiting for you to snap that but latter it will zap you with the secret that inside. Reading this book close to it was fantastic author who all write the book in such remarkable way makes the content interior easier to understand, entertaining way but still convey the meaning completely. So , it is good for you because of not hesitating having this ever again or you going to regret it. This book will give you a lot of positive aspects than the other book possess such as help improving your expertise and your critical thinking method. So , still want to hold off having that book? If I have been you I will go to the e-book store hurriedly.

Nancy Collins:

In this particular era which is the greater individual or who has ability in doing something more are more valuable than other. Do you want to become certainly one of it? It is just simple strategy to have that. What you need to do is just spending your time not very much but quite enough to get a look at some books. One of several books in the top collection in your reading list will be Intelligent Unmanned Ground Vehicles: Autonomous Navigation Research at Carnegie Mellon (The Springer International Series in Engineering and Computer Science). This book and that is qualified as The Hungry Hills can get you closer in getting precious person. By looking way up and review this book you can get many advantages.

Jason Buckley:

That book can make you to feel relax. That book Intelligent Unmanned Ground Vehicles: Autonomous Navigation Research at Carnegie Mellon (The Springer International Series in Engineering and Computer Science) was bright colored and of course has pictures on the website. As we know that book Intelligent Unmanned Ground Vehicles: Autonomous Navigation Research at Carnegie Mellon (The Springer International Series in Engineering and Computer Science) has many kinds or variety. Start from kids until

young adults. For example Naruto or Investigation company Conan you can read and believe you are the character on there. Therefore not at all of book are usually make you bored, any it can make you feel happy, fun and loosen up. Try to choose the best book for yourself and try to like reading in which.
