## Agroecological Economics: Sustainability and Biodiversity Paul Wojtkowski

Agroecology is the science of applying ecological concepts and principles to the design, development, and management of sustainable agricultural systems. Agroecological economics, a subsection of agricultural economics, evaluates the ecological consequences of agricultural methods on the economic scale.

Agroecological economics considers green engineering as a means of measurement.

As the environmental movement unfolds, the importance of biodiversity and long-term sustainability are indisputable. Progress depends on determining the economic viability of terrestrial agroecosystems. What is lacking is the analysis needed to bring biodiverse and sustainable systems to fruition. **Agroecological Economics** analyzes the current topics that must be addressed in order to provide sustainable agricultural systems. It explains the economics of land-use ecology with emphasis on changing over from a conventional model of agriculture to environmentally- and ecologically-friendly models and the financial incentives that are important to these practices.

- \* Analyzes agricultural solutions with economic testing
- \* Includes a complete analysis of recent biodiversity-based research with valuable new economic methodologies
- \* Provides various applications to mitigate the problems which have economic and ecological effects on agroecosystems
- \* Offers applications of ecologically-sound land-use practices in production and manufacturing
