**Pediatric Brain and Spine: An Atlas of MRI and Spectroscopy** L.M. Ketonen, A. Hiwatashi, R. Sidhu, P.-L. Westesson

This is an atlas on contemporary MR imaging of the brain and spine in neuroradiology. It has continuously gathered pediatric central nervous system. We have concentrated on interesting cases. When Dr. Ketonen moved from Massachusetts General Hospital in Boston to the University of Rochester it was quite obvious, looking into and neck. her new office, that she had a very extensive collection. The book starts with a chapter on the normal anatomy of such cases. She would have needed a much more myelinization and normal variance. We are including larger of course than the one we were able to offer her chapters on malformations, inherited conditions, infections, just to store her enormous teaching file. Seeing her collection, tumors, trauma, vascular abnormalities, and phenomenal collection of cases and pairing that with spine abnormalities. The last chapter of the book is a chapter on our positive experience writing our previous book, a miscellaneous chapter that includes all those cases. Diffusion-Weighted MR Imaging of the Brain, it was that did not fit well in other categories. The chapter obviously that we had both an idea and the material for on trauma and brain damage includes an extensive chapter on another neuro-imaging book. We decided on the text section on CNS manifestations of nonaccidental pediatric of pediatric neuro-imaging with Dr. Ketonen as the pediatric trauma. There is also an exciting chapter lead author.
